DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4, 6-9 and 11-14 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,411,484 to Shattuck in view of US 5,154,690 to Shiono.
- 3. **As to claim 1**, Shattuck teaches a device to secure medical tubing to a body comprising a one-piece fabric band (the band is formed with tricot fabric) having at least a first closed loop (formed when the cincture **1** is wrapped around a user's head) and a second closed loop **3**, wherein the first closed loop fits elastically around a portion of the body and the second closed loop is capable of receiving and holding medical tubing close to the body. The band is inherently elastic since the band is formed from tricot, which is elastic, as taught by Shiono in col. 7, lines 48-54.
- 4. As to claim 2, Shattuck teaches a portion of the body being a head.
- 5. As to claim 3, Shattuck teaches the fabric band comprising non-irritating material (tricot is a non-irritating material).
- 6. **As to claim 4**, Shattuck teaches the fabric band lined with friction creating material (Velcro).

Application/Control Number: 09/930,398

Art Unit: 3761

- As to claims 6 and 11, Shattuck teaches a device to secure medical tubing to a body comprising a one-piece fabric band (the band is formed with tricot fabric) having at least a first closed loop (formed when the cincture 1 is wrapped around a user's head), a second closed loop 3, and a third closed loop (as seen in Fig. 5 when the cincture 1 wraps around the tube), wherein the first closed loop fits elastically around a portion of the body and the second and third closed loops are capable of receiving and holding medical tubing close to the body.
- 8. As to claims 7 and 12, Shattuck teaches a portion of the body being a head.
- 9. **As to claims 8 and 13**, Shattuck teaches the fabric band comprising non-irritating material (tricot is a non-irritating material).
- 10. **As to claims 9 and 14**, Shattuck teaches the fabric band lined with friction creating material (Velcro).

Claim Rejections - 35 USC § 103

- 11. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 12. Claims 5 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shattuck in view of Shiono and in further view of US 3,878,849 to Muller et al.

Art Unit: 3761

13. **As to claims 5 and 10**, Shattuck teaches the second closed loop formed with heat sealing (col. 3, lines 61-62) but is silent with regards to the closed loops formed by stitching.

Muller teaches a device for holding a medical tubing to a body, wherein the device has closed loop formed with stitching 42.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to form the second closed loop of Shattuck with any well known attachment, such as stitching, because Shattuck teaches that the loop could be formed with any permanent attachment. Furthermore, it would have been obvious to form the first and third closed loops of Shattuck with stitches in order to provide a customize tube holder that would not require any further adjustability.

Response to Arguments

- 14. Applicant's arguments filed 2/25/04 have been fully considered but they are not persuasive.
- 15. In response to applicant's arguments that Shattuck fails to teach an elastic band, it should be noted that Shattuck does teach a one-piece band that is made of tricot (col. 3, line 56), which is inherently elastic as shown by Shiono (col. 7, lines 48-54). The Shiono reference is merely used to show a characteristic that is not disclosed but inherent.

Art Unit: 3761

Conclusion

16. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Darwin P. Erezo whose telephone number is (703) 605-0420. The examiner can normally be reached on M-F (8:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Milano can be reached on (703)308-2496. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
